IT Network Specialist

Mitsubishi Motors North America is relocating its Headquarters from Cypress, CA to Franklin, TN! In support of our exciting big move, we are looking for a Network Specialist to join our Information Technology team. As a Network Specialist, you will implement advanced networks and troubleshoot complex network problems in a LAN/WAN environment composed of servers, switches, routers, and firewalls.

What you'll be doing:

- Work with a team of network administrators and PC technicians in implementing moderately complex Local Area Networks with Wide Area Network links
- Configure and support new virtual servers running on Windows Server and Linux Server in a 3rd party Cloud Data Center environment
- Configure and support new enterprise storage platforms (NSX) running in a 3rd party Cloud Data Center environment
- Configure, administrate, and support Microsoft O365 Cloud Platform: MS Outlook/Exchange, MS Office Suite, Teams, Skype, etc.
- Evaluate and install switches and routers for satellite offices
- Provide technical support for complex server technologies, such as fiber channel storage and back up
- Provide technical assistance to resolve complex network problems involving routers and switches
- Provide file server installations, upgrades, and on-going maintenance
- Evaluate new hardware and software solutions that would fit into the LAN infrastructure and business goals
- Coordinate and/or perform problem analysis and resolution for data-related networks for local and regional facilities, dispatching equipment or network vendors where appropriate, and escalating of critical issues where necessary
- Perform daily performance & traffic analysis, maintaining daily logs (MPLS, Internet, IPVPN, VOIP, and SDWAN)
- Provide support for implementing and maintaining firewalls and Network Address Translation.
- Calmly respond in highly stressful business conditions and effectively manage multiple priorities
- Meet stated deadlines while delivering quality results
- Perform other related duties as assigned

What you'll have:

- 6 - 9 years of LAN experience and/or equivalent technical education
- BA/BS degree in Computer Science/Information Systems or equivalent combination of education and experience.
- Professional certification from a major vendor, such as Microsoft, Cisco, or Checkpoint. (i.e.- MCSE, CNE, CCNP, CCSA)
- Prior experience in windows server and linux server administration.
- Prior experience with Firewall implementations and maintenance.
- Prior experience with Cisco's major routers and switches.
- Prior experience setting up websites.
What we’ll provide:

- Competitive compensation package
- Comprehensive healthcare coverage, including medical, dental, vision
- Wellness program
- Paid holidays and paid time off
- 401(k) savings plan with company match
- Professional growth and development programs, including tuition reimbursement
- Vehicle lease and purchase programs
- Open and collaborative work environment
